

Providing Solutions for Project Development & Execution

We are a consultancy company centered around the energy transition, specialized in Hydrogen, Power-to-X and Energy Systems, combining decades of industrial experience with technological expertise and cutting-edge market knowledge.

Whether you need support in defining, organizing, managing, executing, or verifying specific project phases - or a structured, end-to-end solution - we maximize opportunities, streamline development, and anticipate execution challenges to facilitate FID and ensure optimal project delivery.

Our Service Activities

In all our service activities, we meticulously address and align each project phase throughout its entire journey—be it defining, organizing, managing, executing, verifying, or providing a comprehensive end-to-end solution.

Providing Solutions for Project Development & Execution

Our References

Pre-FID Tendering Support

Developed tendering documentation for a European e-methanol and SAF investor, supporting two 100 MW+ projects. Assisted in consultation and selection processes, including FEED quotation requests and execution framework commitments.

Island Grid Study

Benchmarked island grid design options for a 200 MW electrolyzer connected to wind and PV farms for a U.S.-based e-methanol investor. Analyzed configurations using a technical-economic model to determine the optimal setup based on cost, efficiency, & availability.

OEM Selection Review

Compared two electrolyzer OEM proposals for the final selection of one on a 200 MW project. Evaluated technology maturity, scope, terms, performance, service, pricing, and competitiveness, providing selection recommendations and site visit support for an e-methanol investor.

Hydrogen Hub Check

Conducted a sanity check on a European utility's hydrogen hub feasibility study, assessing design, business plan viability, permitting, and execution strategy, with alternative recommendations.

Hydrogen Plant Proposal

Prepared a commercial offer for a turnkey hydrogen plant solution for an EPC company entering the hydrogen market. Designed a system integrating batteries and hydrogen to provide 24/7 power from PV for an island grid.

Electrolyzer OEM Support

Supported an electrolyzer OEM in pre-FEED to qualify for an unprecedented-scale project, defining documentation, scope, interfaces at battery limit, schedule, and contractual commitments.
